

Questo é un sistema di staffe forate, snodate ed asolate che permettono di montare diritti ed allineati fra di loro i componenti delle porte per ascensori, anche in presenza di muri storti, non perpendicolari, sporgenti e rientranti. Inoltre, essendo composta da staffe ambidestre, permette di aggirare eventuali ostacoli dovuti alla presenza di ferri per armatura presenti nelle pareti in calcestruzzo, consentendo la possibilità di spostare i fori nel muro senza dover spostare i componenti della porta.
